Our Safewrench® slogging wrench range will significantly reduce workplace accidents. With its unique ridged design, this slogging wrench locks into position and safely attaches at any angle.

Secure attachment of the Safewrench® gives users more freedom of movement and keeps hands away from the striking area reducing the risk of hand injuries.

Using Safewrench® for overhead fittings also reduces the risk of head injuries - the wrench stays attached, no matter how hard its struck.

Secure attachment also removes the need for second person assistance, boosting overall on-site productivity and reducing staffing needs.
